

TORYGLEN PARK DETAILED AREA

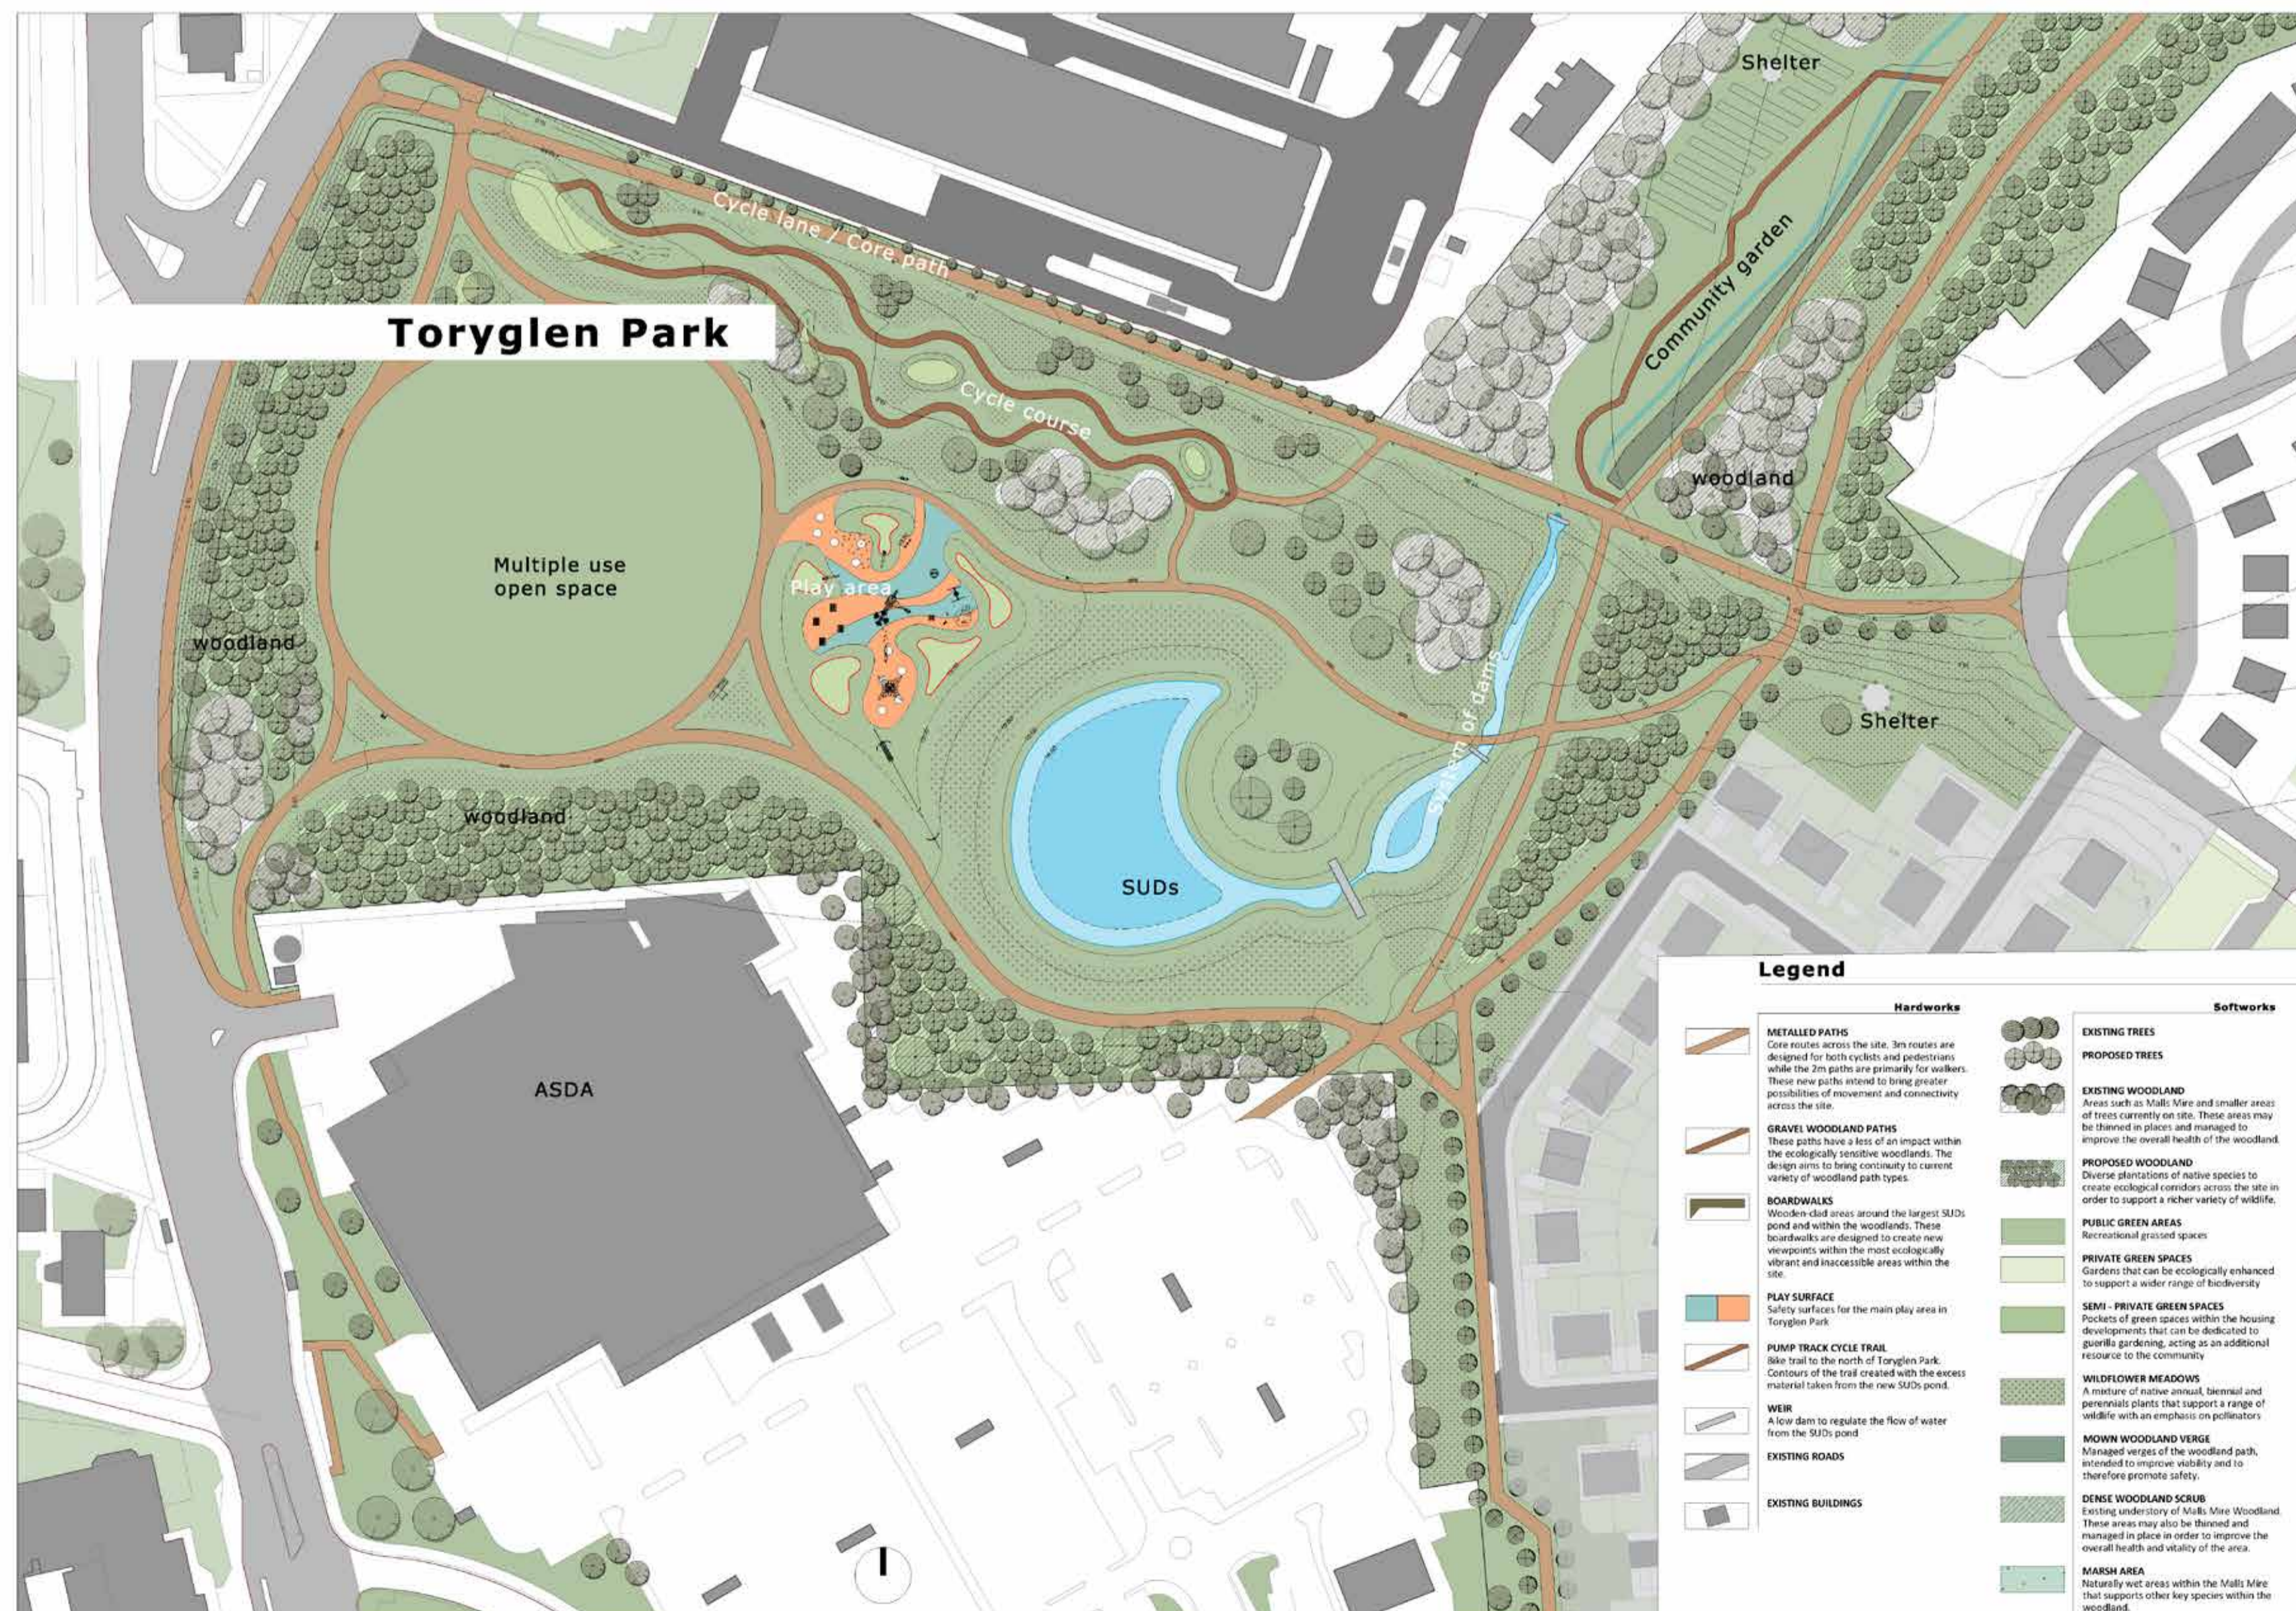

TORYGLEN TODAY

- Metalled Path
- Secondary Path

Example Layout
Toryglen Park - flexible use amenity areas, paths and cycle lanes with stopping points.

Toryglen Park

Legend

- | Hardworks | | Softworks | |
|-----------|--|-----------|---|
| | METALLED PATHS
Core routes across the site. 3m routes are designed for both cyclists and pedestrians while the 2m paths are primarily for walkers. These new paths intend to bring greater possibilities of movement and connectivity across the site. | | EXISTING TREES |
| | GRAVEL WOODLAND PATHS
These paths have a low impact within the ecologically sensitive woodlands. The design aims to bring continuity to current varieties of woodland path types. | | PROPOSED TREES |
| | BOARDWALKS
Wooden-deck areas around the largest SUDs pond and within the woodlands. These boardwalks are designed to create new viewpoints within the most ecologically vibrant and inaccessible areas within the site. | | PROPOSED WOODLAND
Diverse plantations of native species to create ecological corridors across the site in order to support a richer variety of wildlife. |
| | PLAY SURFACE
Safety surfaces for the main play area in Toryglen Park. | | PUBLIC GREEN AREAS
Recreational grassed spaces. |
| | PUMP TRACK CYCLE TRAIL
Also trail to the north of Toryglen Park. Contours of the trail created with the excess material taken from the new SUDs pond. | | PRIVATE GREEN SPACES
Gardens that can be ecologically enhanced to support a wider range of biodiversity. |
| | WEIR
A low dam to regulate the flow of water from the SUDs pond. | | SEMI-PRIVATE GREEN SPACES
Pockets of green spaces within the housing developments that can be dedicated to guerrilla gardening, acting as an additional resource to the community. |
| | EXISTING ROADS | | WILDFLOWER MEADOWS
A mixture of native annual, biennial and perennial plants that support a range of wildlife with an emphasis on pollinators. |
| | EXISTING BUILDINGS | | MOWN WOODLAND VERGE
Managed areas of the woodland path, intended to improve visibility and to enhance pedestrian safety. |
| | | | DENISE WOODLAND SCRUB
Existing understorey of Malls Woodland. These areas may also be thinned and managed in place in order to improve the overall health and vitality of the area. |
| | | | MARSH AREA
Naturally wet areas within the Malls Woodland that supports other key species within the woodland. |

Visualisation of Toryglen Park

EXAMPLES OF PLAY

Drapers Field - Kinnear Landscape Architects / London, 2014

Terrain morphology shaped to enhance the experience of play. Cycle courses and adventure play equipment intertwined with natural play elements.

Thetford Forest Pump Track - UK

Course woven between the existing trees. Suitable for many abilities and ages.
